

Southern Africa's Trimble construction distributor

Information from CLM Solutions

CLM Positioning Solutions has recently been appointed as Trimble's construction distributor for the Southern African region.

Trimble's construction solutions include site positioning systems (SPS), grade control systems (GCS) and construction instruments (CI). These solutions are based on Trimble's proven leadership in GPS, optical survey and laser technologies.

The RTK GPS and Robotic Total Stations that comprise the SPS use controller software (SCS900) that has been designed specifically for construction contractors and surveyors. The SPS products make measurement and stakeout for road construction, general earthworks, landfill and mining a breeze.

Trimble's GCS is a range of machine control products designed to accurately control and automate earth moving dozers, graders, excavators and scrapers. From the simple entry level elevation control system for dozers through to the top of the range fully

automated 3D blade control systems for motor graders, CLM has a solution to maximise the efficiency of your plant.

CLM also provides solutions for all measurement, levelling and alignment requirements on building sites. These CI products include easy to use laser distance meters, laser line generators, laser pointers, laser levels, automatic levels, construction theodolites, total stations and many other survey accessories.

CLM Position Solutions, a privately owned and managed company, was registered in South Africa with the sole purpose of marketing Trimble's construction technologies throughout Southern Africa. The directors of CLM are actively involved in the day-to-day operations of the company, ensuring that the company remains informed, flexible and responsive to its clients'

needs. The company's headquarters are based in Johannesburg with regional offices to open shortly throughout the region of operation.

The company is headed by a sales and marketing director (Mark Smith), focussing on sales and customer relations, and a technical director (Conrad King) looking after training, service and support. Because they understand that people buy from people, the company is committed to building strong and lasting relationships with its customers. These relationships are made possible by the support of a highly dedicated, skilled and honest sales and support team. Its focus on the construction industry combined with the understanding of the customer's needs will ensure CLM becomes the preferred supplier.

CLM will set a new standard in the supply, support and servicing of precision positioning solutions. Combined with Trimble's construction product offering, it intends to become the leader in this dynamic field.
